Happy Star Wars Day 2020! To celebrate it, Disney has released Star Wars: Rise of Skywalker at Disney + early to lift everyone's mood. Here's how to watch Star Wars: Rise of skywalkers online for free now. Originally meant to arrive on the Disney+ streaming service in two months, Disney has decided that there's no better day to release Star Wars: The Rise of Skywalker from May 4, Star Wars Day for many. It includes the other 8 parts of the Skywalker saga of Star Wars movies on the service which means you're good to go if you want a massive binge watching session of everyone's favorite Sci-Fi saga. The best part? If you sign up for a free 7-day trial of Disney+, you can see the latest Star Wars movie, the rest of the saga, and anything else you feel like completely for free. Disney+ is home to almost every Disney movie out there, tons of Marvel content, from the latest Avengers movies to X-Men cartoons, as well as the hit series Mandalorian, which expands over recent movies on the Star Wars universe too. Simply put, you're not going to run out of options of things to watch at Disney+. Rise of Skywalker ends in the story of Rey, Kylo Ren, Finn and Poe DeMaron, but you can easily move on to watching Star Wars: Clone Wars if you need even more Star Wars action, as well as old classic movies. Disney+ also offers every episode of The Simpsons that has been aired so far. It's over 30 years of content. All you have to do is sign up for disney+ free trial. It is very easy to do with no risk or contract requirement. Just cancel it in 7 days before its renewal date, and you don't have to pay one per cent. We're confident you'll be eager to make that membership effective, although there are so many great shows and movies here. If you decide, Disney+ usually costs \$7 per month but for \$13 per month, you can catch it up with Hulu and ESPN+ which have bundled a deal for sports and TV enthusiasts. Grab whatever you decide, grab Disney+'s 7-day free trial now and enjoy celebrating Star Wars Day with a view to the rise of Skywalker. It is now available. A 2010 survey The editors' recommendations, the Federal Communications Commission (FCC), found that 80 percent of people with broadband internet in the U.S. didn't know that broadband connection speeds [Source: Gurin]. In Some may be surprised to learn that they are only getting a fraction of the advertised maximum speed of their service. For example, in your Internet service provider (ISP) you might be on a plan that says up to 30 Mbps down, while you're actually only getting a download speed of about 19 Mbps. Web sites like speedtest.net offer free trials for both the upload and download speed of your Internet connection, but beware of some attractive start buttons in ads on sites – many are really well-designed ads that look like they are part of the site's testing mechanism. Before calling your ISP about any discrepancies, remember that the plan you are on is based on the maximum value. Your actual results are influenced by factors such as your ISP's peak web usage time, the number of people sharing your line, and your distance from ISP's fiber pipeline. Advertising When it comes to HD video streaming, you'll need broadband speeds or bitrate, capable of handling a progressive scan rate of 720p. Since your HD-enabled screen is refreshing the screen 60 times per second, this means making sure that all those video frames are received and ready to play before they are needed. Your computer or other device will cache all incoming data and put the video frame in the queue so they are ready for smooth playback. From there, determining the speed you'll need appears to be the matter of math. This math, though, requires some thoughts about the size of the video file. It depends on how the file is encoded, which is commonly referred to as a file type. The MPEG-2 standard can have 720p video of an hour at 2.7GB while one of the latest video standards can have the same video, H.264/Advanced Video Coding (AVC), approximately 13 GB [Source: Digital Revolt]. Thus, the difference in file size can be an explanation for why different web sites have different speed recommendations for streaming their HD content. Let's say the video you're streaming is an hour long, and the file size for that video is 6 GB. While a broadband connection of up to 10 Mbps lets you easily stream a lot of video content online, you want 15 Mbps or more for this six gigabytes of HD video. Here's a quick look at the math: Estimated megabytes: 6 GB = 6,144 MB (1 GB = 1024 MB) Estimated megabits: 6,144 MB = 49,152 MB (1 byte = 8 bits) Count per hour: 60 x 60 = 3,600Megabits per hour Count: 49,152 / 49,152 3,600 = 13.65 Mbps When you're streaming HD content, also consider whether the connection jumps on a wireless router. If so, note that the connection speed may fall on the connection if the WiFi standard is not fast enough. You want to avoid slow 802.11b connections, and the latest 802.11n is the ideal choice for keeping up with fast broadband services. As you do anything on

your broadband connection Make sure your ISP will slow down or discontinue your service after reaching a certain bandwidth limit. Some sites, like Netflix, let you choose less Quality means to help you stay within those thresholds, even if it delivers higher definitions. Also, make sure the hardware you're using isn't just HD-enabled, but it has the processing power to cache video files and play in HD.
